Open Innovation
Toolkit

The Open Innovation Toolkit is a collection of tools and methods for human-centered design for people engaged in open source product design and beyond. We invite everyone to use it, share their experiences, methods and ideas to help us build this collective resource.

To learn more visit
toolkit.mozilla.org

The Open Innovation Toolkit is sourced from best practices across multiple industries to help you incorporate human-centered design into your product development process.

Whether you have a design method that has worked well in distributed teams, or you want to learn more about the resources already available, the Open Innovation Toolkit is the place to go.

More than anything, this toolkit is an invitation to everyone, from developers to advocates, to share your experiences, methods and ideas to help build this collective resource that can help the community learn from each other and build a better way of integrating human-centered design in open source and beyond.

We're currently in beta so we invite you to visit us at **toolkit.mozilla.org** and share your ideas!
